

61 SERIES

MAXIMUM FLEXIBILITY AND SAFETY

Choose maximum flexibility and safety for your retail installations.

The 61 series professional large format displays are the ideal interactive display solution for in-store communication. They can operate 24/7 both in landscape and portrait orientation, and thanks to the touch through-glass function you can be sure your installation is water and dust proof.

The extra 100x100 VESA mounting holes at the back allow you to easily mount an external computer (Android or NUC) directly onto the display, making it an all-in-one solution.

BUILT TO LAST

The metal housing, edge-to-edge glass and the 40-touch point Projective Capacitive (PCAP) touch technology makes these displays virtually indestructible.

Engineered for continuous use in even the most demanding environments the 61-series displays will continue to deliver an accurate and flawless experience for many years to come.

SHOW PERFECT IMAGES ALL THE TIME

The 61-series displays come with either an AMVA 3 panel with FULL HD resolution (43") or an IPS panel with 4K UHD resolution (55").

Both displays feature a 24/7 operating time, landscape and portrait orientation that makes sure that it always shows that picture-perfect image.
